HIMANSHU KALA

QUALITY ASSURANCE ENGINEER · MANUAL, API & LLM / GENAI TESTING

Meerut, India | +91-7417517798 | hkala402@gmail.com | himanshukala.co.in | github.com/Hkala402
linkedin.com/in/himanshu-kala-436751235

SKILLS

AI / LLM TESTING

- Hallucination Detection
- AI Safety Testing
- Prompt Engineering
- LLM Output Evaluation
- Adversarial & Edge-Case Prompting
- AI Regression Testing

TESTING & TOOLS

- Test Case Design
- REST API Testing
- Regression Testing
- Postman
- JIRA
- SQL
- LogRocket
- Retool

EDUCATION

Bachelor of Computer Applications (BCA) — 2022
Chaudhary Charan Singh University, Meerut

Class XII — 2019
Uttar Pradesh Board, Meerut

Class X — 2016
CBSE, Meerut

ACHIEVEMENTS

- Introduced a structured prompt-testing strategy that improved the efficiency of AI response validation.
- Strengthened AI safety compliance by systematically detecting harmful content and verifying model accuracy before production release.
- Recognised for analytical debugging and proactive communication during AI product releases.

SUMMARY

Quality Assurance Engineer with 3+ years of experience across manual, API and AI/LLM testing, specialising in GPT-style LLM evaluation, hallucination detection and AI safety validation for conversational AI products. Skilled in designing structured test cases, executing REST API tests in Postman and running regression cycles that catch defects before release. Works effectively in Agile teams to ship reliable, safe AI products.

EXPERIENCE

Associate QA — Oct 2023 - Nov 2026
Simulblade Technology (via Tavus.io)

- Evaluate 300+ GPT-style LLM responses every week for contextual relevance, factual accuracy and logical consistency.
- Execute AI safety testing to identify unsafe, harmful, biased or policy-violating responses, improving overall system reliability.
- Detect fabricated and misleading AI outputs through hallucination testing, catching defects during regression cycles before release.
- Design structured, adversarial and edge-case prompts to stress-test the robustness of conversational AI systems.
- Test conversational AI workflows and digital-human interaction systems end to end, validating AI video pipelines for lip-sync, facial alignment and voice accuracy.
- Perform REST API testing in Postman, validating request/response payloads, authentication, status codes and error handling, and log verified defects in JIRA.

PROJECTS

AI Video Automation — Tavus AI Integration — 1 month

- Tested AI video personalisation workflows that turn raw inputs into finished personalised videos.
- Validated Phoenix AI output for facial-expression realism and speech sync, and ran regression tests on conversational AI and digital-avatar modules to keep performance stable across deployments.

AI Test Case Generator — 2 weeks

- Built and deployed a web-based AI tool that generates structured positive, negative and edge-case QA test cases from a plain-English feature description.
- Applied prompt engineering, LLM output validation and QA-focused product thinking.

Phoenix-4 Replica Rejection Analyzer — 3 weeks

- Created an AI diagnostic tool that predicts why a Tavus Phoenix-4 training video would be rejected before submission, checking it against 7 official requirements.
- Uses Gemini AI to write a plain-English fix plan with an approval-probability estimate.
